

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A single piece, hand-held container of a non-reactive material for high temperature preparation of materials for testing in the presence of an electrolyte, said container being at least partially covered with a ~~non-reactive-coating~~ that is non-reactive to the electrolyte.

2. (Original) The container according to claim 1, wherein the electrolyte is an acid.

3. (Original) The container according to claim 2, wherein the acid is sulfuric acid.

4. (Original) The container according to claim 2, wherein the acid is hydrofluoric acid.

5. (Original) The container according to claim 2, wherein the acid is perchloric acid.

6. (Original) The container according to claim 1, wherein the non-reactive material is a graphite or graphite composite.

7-8. (Cancelled)

9. (Original) The container according to claim 6, having a bottom and sides wherein the transition between the bottom and sides is arcuate.

10. (Currently Amended) A single piece, hand-held container made of a non-reactive material for holding materials in the presence of acid comprising a base connected to sides of the container forming an internal cavity that contains the materials and acid, said container being at least partially covered with a ~~non-reactive coating~~ that is non-reactive to at least the acid.

11. (Original) The container according to claim 10, wherein the container has a cover.

12. (Original) The container according to claim 11, wherein the container has a cover that matingly engages the container with at least one flange and c-channel.

13. (Original) The container according to claim 10, wherein the container has a pouring spout.

14. (Original) The container according to claim 10, wherein the container has a handle.

15. (Original) The container according to claim 14, wherein the container has a pouring spout.

16. (Currently Amended) A single piece, hand-held container made of a non-reactive material for preparing or testing materials that is resistant to acids and temperature of at least 400 degrees Celsius made of a graphite or graphite composite material having a thermal conductivity of 40 to 120 W/(m\*K), said container at least partially covered by a non-reactive coating.

17. (Original) The container according to claim 16, wherein the graphite or graphite composite material has a compressive strength in the range of 80 to 150 N/mm<sup>2</sup>.

18. (Currently Amended) The container according to claim 17, wherein the graphite or graphite composite has a Young's Modulus in the range of (10 to 13)\*10<sup>3</sup> N/mm<sup>2</sup>.

19. (Original) The container according to claim 16, wherein the graphite or graphite composite has a bulk density of about 1.7 to 1.9 g/cm<sup>3</sup>.

20. (Original) The container according to claim 16, wherein the graphite or graphite composite is R751O.
